

Task Breakdown with Timeline

Week 1: Project Setup & Core Architecture (April 21-27)

1. Iteoluwakiishi:
 - Set up repository structure
 - Create initial wireframes for Shopping Cart and Checkout
 - Design a database schema for orders and admin functions
 - Initialize a React project with routing
 - Begin shopping cart component implementation
2. Fuchinanya:
 - Create wireframes for User Authentication and Game Catalog
 - Design a database schema for users and games
 - Set up Node.js/Express backend structure
 - Initialize the MongoDB connection
 - Begin user authentication implementation

Week 2: Feature Development (April 28-May 4)

1. Iteoluwakiishi:
 - Complete shopping cart functionality with persistence
 - Implement basic checkout process flow
 - Begin the admin dashboard layout and functionality
2. Fuchinanya:
 - Complete user authentication (frontend & backend)
 - Implement a game catalog with filtering
 - Begin user profile page development

Week 3: Integration, Testing & Finalization (May 5-11)

1. Iteoluwakiishi:
 - Complete admin dashboard with CRUD operations
 - Finalize the checkout process with order confirmation

- Test and debug the cart and admin features
 - Prepare documentation and final deliverables
2. Fuchinanya:
- Complete user profile management
 - Add community features (reviews, ratings)
 - Test and debug authentication and catalog features
 - Prepare documentation and final deliverables

Collaboration Points

- Daily check-ins via messaging
- Two sync meetings per week (Mondays & Thursdays)
- Code reviews before merging any feature branches
- Joint testing sessions at the end of Week 2 and throughout Week 3
- Shared responsibility for documentation updates
